Thought of the week

As President Trump begins his second term, the politically charged environment continues to shape consumer sentiment. The latest University of Michigan survey of inflation expectations revealed a sharp increase, with both one-year and five-year expectations jumping to 3.3%—levels last seen in May 2024 and June 2008, respectively. In contrast, December's CPI report showed core inflation easing more than expected to 3.2% y/y. This disconnect has investors asking: why are consumer inflation expectations climbing despite signs of easing inflation, and what does it mean for investing?

To answer these, it is important to separate signal from the noise when interpreting survey data. Firstly, household inflation expectations are very volatile and highly sensitive to recent price changes in certain categories like gas (up 4.4% m/m in Dec.). Secondly, as the chart of the week shows, political bias heavily skews responses. Republicans expect inflation to nearly stall at 0.1%—a level the Fed considers unhealthy for economic growth—while Democrats forecast a surge to 4.2%, reflecting strong concerns about tariffs under the new administration. Lastly, consumer surveys often overestimate inflation outside major regime shifts, limiting their long-term reliability. On the other hand, professional forecasters have historically been more accurate. Their latest projection for year-ahead inflation remains at 2.3%, suggesting that not all political rhetoric will translate into policies and inflation will remain contained near the Fed's target.

For investors, the takeaways are clear: don't let political leanings influence investment decisions or distract from economic reality. Staying grounded with a well-diversified portfolio is essential to navigating the policy fog of 2025.
